

COMMERCIAL

Commercial projects come in all shapes and sizes. Each warehouse, data center, manufacturing facility, workplace and distribution center is unique. And all these projects demand focused attention. Dialectic mechanical, electrical and plumbing (MEP) designs meet these needs and reflect the personality of each business.

WORKPLACE

Workspaces tell a story. They reflect the company's brand and culture. But they're also designed to recruit and retain talent.

Unique architectural features can help workers connect. Environments with collaborative areas, kitchens, game rooms, pet areas and gyms not only feel personal – they enhance productivity, too. Dialectic creates flexible and sustainable spaces that are welcoming but also support changing technology. We understand the role of on-site data centers, connectivity and systems for today's businesses.

DATA CENTERS

Data centers are the engines that power so many organizations. They're mission critical for consumers, healthcare facilities, educational institutions, businesses, utilities and governments.

At Dialectic, we have expertise creating data centers that are reliable, flexible and secure. Our MEP designs focus on inventive and sustainable

solutions. Power consumption, electrical capacity, cooling systems, lighting layout and design, back-up power, fire protection and security are critical. We understand how all these elements must work together, and we know how to make it happen.

DISTRIBUTION CENTERS

Distribution centers are a key part of customer service. What good is an amazing product if you can't get it out the door?

Dialectic creates efficient, scalable and employee-friendly distribution centers. Our MEP designs consider power availability for systems and amenities while controlling energy costs. We design to minimize energy costs, maintenance and water use. And our sustainable designs create green facilities that can be a point of pride. Whether it's one location or 11, 35,000 square feet or 350,000, Dialectic has the expertise to create MEP designs for any requirements.
