

EDUCATION

Educators require facilities to serve a variety of purposes, and they need creative, trusted design partners to develop facilities that can support new and changing methods of teaching. Facilities must include open, flexible space that can adapt to many uses as well as specialized spaces that enable students to learn specific subjects. Administrators need a collaborative relationship with their architectural and MEP design partners to create the right learning spaces for the students who will use them.

ELEMENTARY SCHOOLS AND EARLY LEARNING FACILITIES

Learning is fun in a supportive environment. Specialized spaces – like hearing and speech labs, auditoriums, libraries and outdoor play areas – meet the needs of early childhood educators and their young students.

HIGH SCHOOLS AND HIGHER EDUCATION

Classrooms aren't one-size-fits-all. As students grow, they need spaces for specific curricula. Culinary arts, sports medicine, science labs, computer coding and TV/radio broadcast all have unique design and equipment needs.

Dialectic partners closely with administrations, facilities and maintenance departments. We consider current needs as well as future maintenance and budgets. Our innovative mechanical, electrical and plumbing (MEP) designs meet project needs while adhering to the school's budget and timeline.

Over the last 30 years, we've worked with more than 100 school districts, colleges and universities to create flexible, forward-looking MEP solutions for these complex projects. Our sustainable approach means our designs create cost savings and provide a greener future.
