

DISTRIBUTION CENTERS & LOGISTICS FACILITIES

Distribution centers and logistics facilities are a key part of customer service. What good is an amazing product if you can't get it out the door?

For more than a decade, Dialectic has designed hundreds of efficient, scalable and employee-friendly distribution centers and logistics facilities in all 50 states. Our MEP engineering designs consider power availability for systems and amenities while controlling energy costs, and are optimized to minimize energy usage, maintenance and water use. Sustainable designs create green facilities that can be a point of pride and contribute to a healthier environment.

We know that each distribution or logistics site is unique in its requirements, so Dialectic's designs are customized to fit the individual needs of your space and geographical location. We're also no stranger to the importance of scheduling when creating a distribution or logistics facility; we'll work with you quickly and efficiently to deliver the highest-

quality result for your project.

Whether it's one location or 11 — 35,000 square feet or 350,000 — Dialectic's MEP engineers have the expertise to meet any requirement.
