

## SENIOR LIVING

At Dialectic, we know the importance of comfort, independence and caretaking when designing senior living facilities.

For years, our MEP engineering team has designed senior living facilities that prioritize cost without sacrificing quality of service or end-product.

Whether it's building out easy-access individual apartments or 24-hour nursing and memory care centers, we know the requirements for creating comfortable spaces for the senior community.

Dialectic has more than 30 years of experience in the MEP design and has the expertise to manage these complex projects. Senior living facilities should reflect the quality of living older adults deserve. Our MEP engineers can help make these spaces comfortable, convenient and hospitable.
